- 12 channel distro

SLR

Example

Front truss (LX-1)

12m truss, 8x Perseo and 8x Strike Array-4
Possibility to add 5 x followspot (not included) at the end of each truss part.

Overhead trusses (LX-2, LX-3, LX-4)

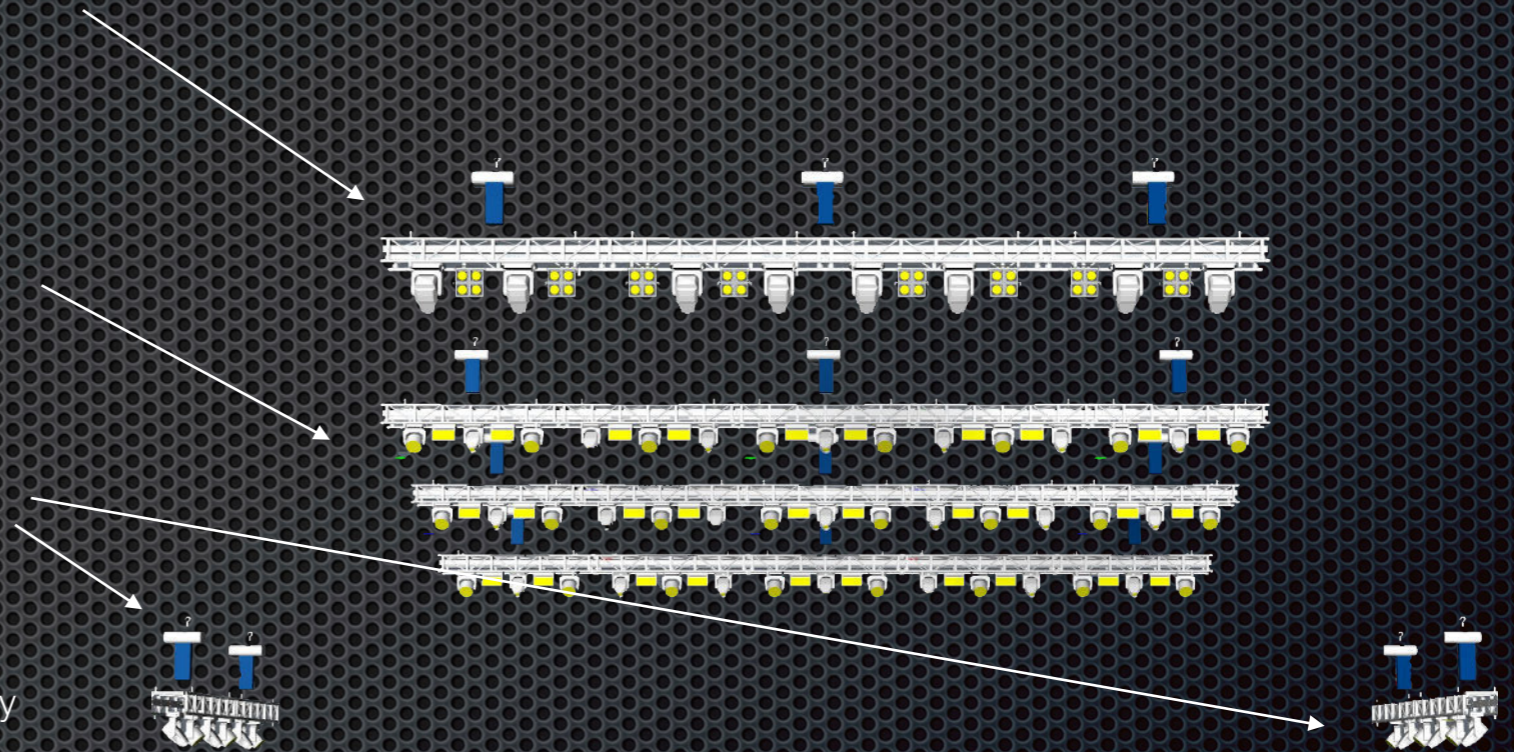

Identical contents:
15m truss, each holding 7x Diablo, 8x Spider and 10x Color Strike-M.

Side trusses (LX-SL, LX-SR)

These trusses are mirrored, both containing:
6m truss holding 3x Diablo and 3x Spider. Spacing and setup identical to overheads, without the Strike-M's.

Positioning

All xyz coordinates of rigging points can be determined by client. Only limitation is max. span of truss (9M)

Freedom of design

With the elements and parts you can create your own design, with your fantasy as the only limitation! Extra angles can be quoted, and parts can be left out.

Crew

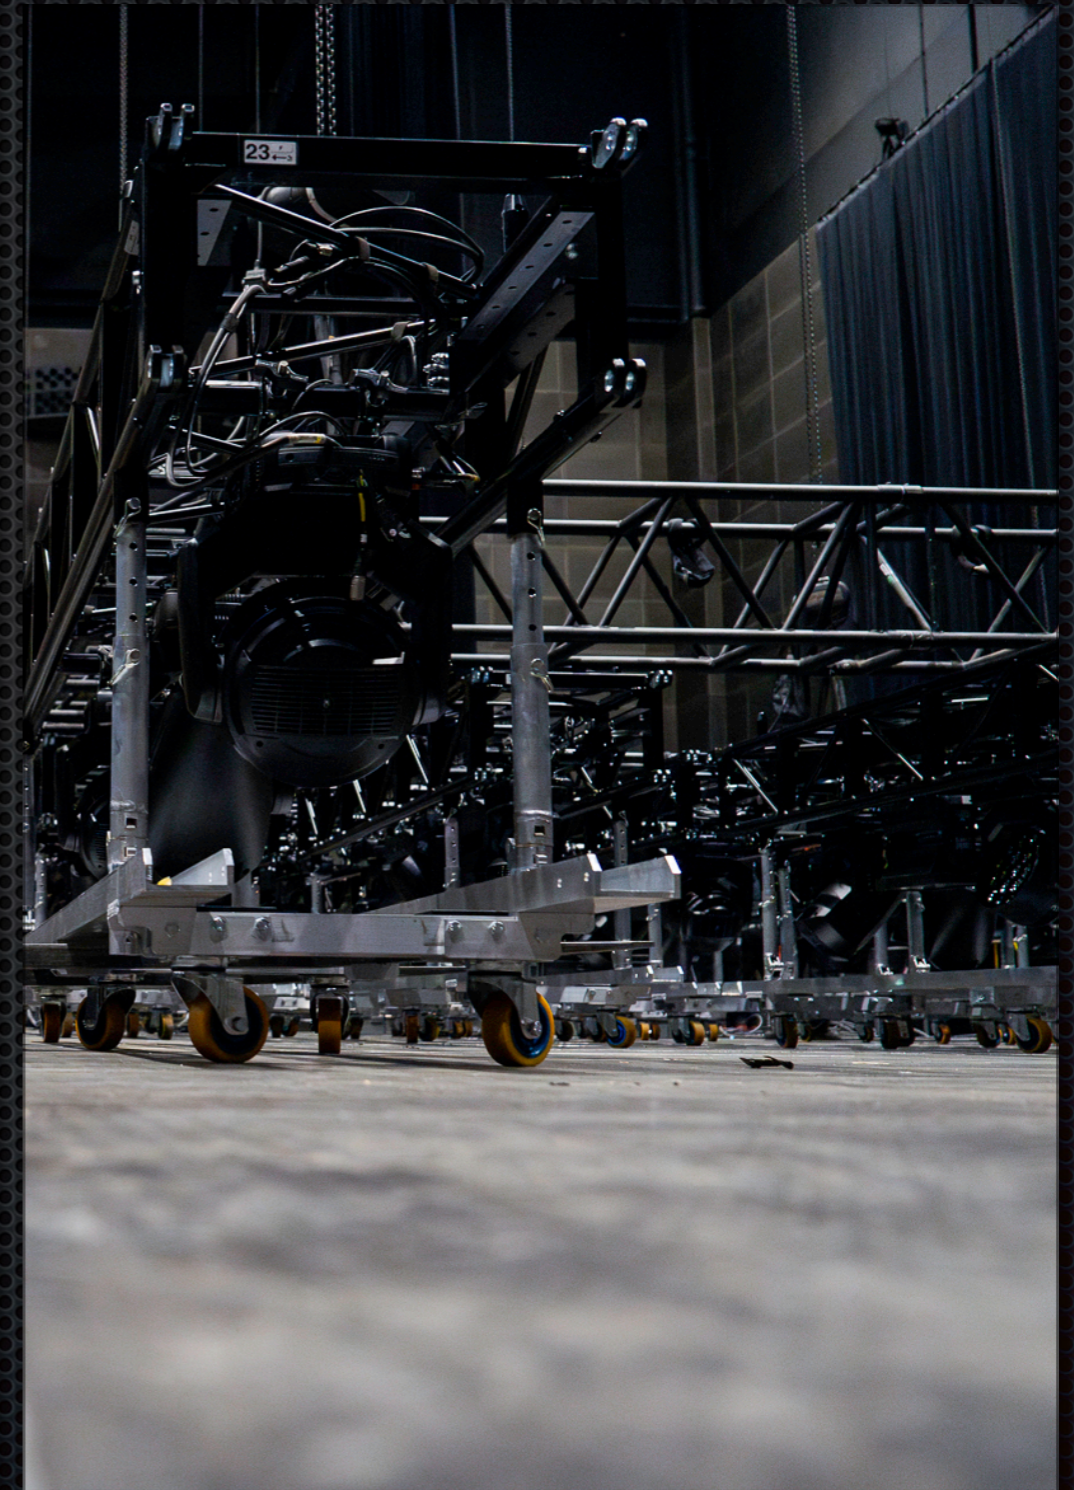

Our SLR system can be built by 3 engineers in 3 - 4 hours, (roof-rigging not included).

Load-out can be ready in 2-3 hours by 3 engineers.

In case of event-time shorter than 5 hours we can do build, show and load-out with 1 shift.

Transport

Our SLR is transported in 1 mega - box trailer. In special cases we can reload to 2 smaller trucks.
